

Night Chat at Lake Claremont

What Urban Biodiversity Teaches Us

Speaker

Dr Ric How

Over 80% of Australians live in urban environments. Large scale clearing of native ecosystems in cities like Perth has left only small remnants of the original vegetation and wetlands, resulting in a sharp decline in native flora and fauna. But just how much will this habitat loss and modification affect our wildlife? And how will this biodiversity loss affect our own future health and well-being?

Dr How is the authority on the subject, having studied 40 remnant vegetation patches in the Perth Metro area over 4 decades.

Tuesday 24th July

Claremont Aquatic Centre, 12 Davies Rd, Claremont

Talk 6:00 – 7:00 pm

Doors open at 5:30 pm (with light refreshments)

Please use the main pool entrance.
